Subject: Application for Java Developer Position

Dear Hiring Manager,

I am writing to apply for the Java Developer position at your organization. I have strong hands-on knowledge of Core Java, including OOP principles, collections framework, exception handling, multithreading, and file handling. I have experience developing backend logic using Java with JDBC, Servlets, and MySQL.

I have worked on Java-based projects such as employee and management systems, where I implemented business logic, database connectivity, CRUD operations, and secure user authentication. These projects helped me gain a solid understanding of backend development, application flow, and clean coding practices.

In addition to Java development, I am familiar with Git, GitHub, Postman, and Agile methodologies. I am currently improving my skills in Spring and Hibernate to strengthen my backend development expertise. I am a quick learner, a problem solver, and eager to contribute effectively as part of a development team.

I would welcome the opportunity to discuss how my Java skills and enthusiasm can add value to your organization.

Thank you for your time and consideration.

Sincerely,
Sai Nikhil
Java Developer
